Live event

Pushing the event live we decided to only release limited amount of information and drip feed as the event grows closer. This replicates the sporadic nature of DIY raves of the 90's and 00's. Launching early allows the attendees to plan out the date in advance and maintain a good turn out on the night.

Prototype/Software V2 [video]

This updated prototype demonstrates how a user can now interact with the speed of the three videos via the + and - arrows. As you can see in the video, a grounding wire has to be held by the user for the Makey Makey to complete the circuit. We will need to solve this grounding issue another way if we are to create a simple and streamlined interaction.
