“By touching the poster you can create music. This 2.0 version of the poster is a multiplayer installation and lets user create their own song just by touching the poster and turning on the different music samples.”

Sound poster is a great example of how something very much 2D can quickly become 3D. Using conductive inks is a good way to hide interactive elements within traditional media.

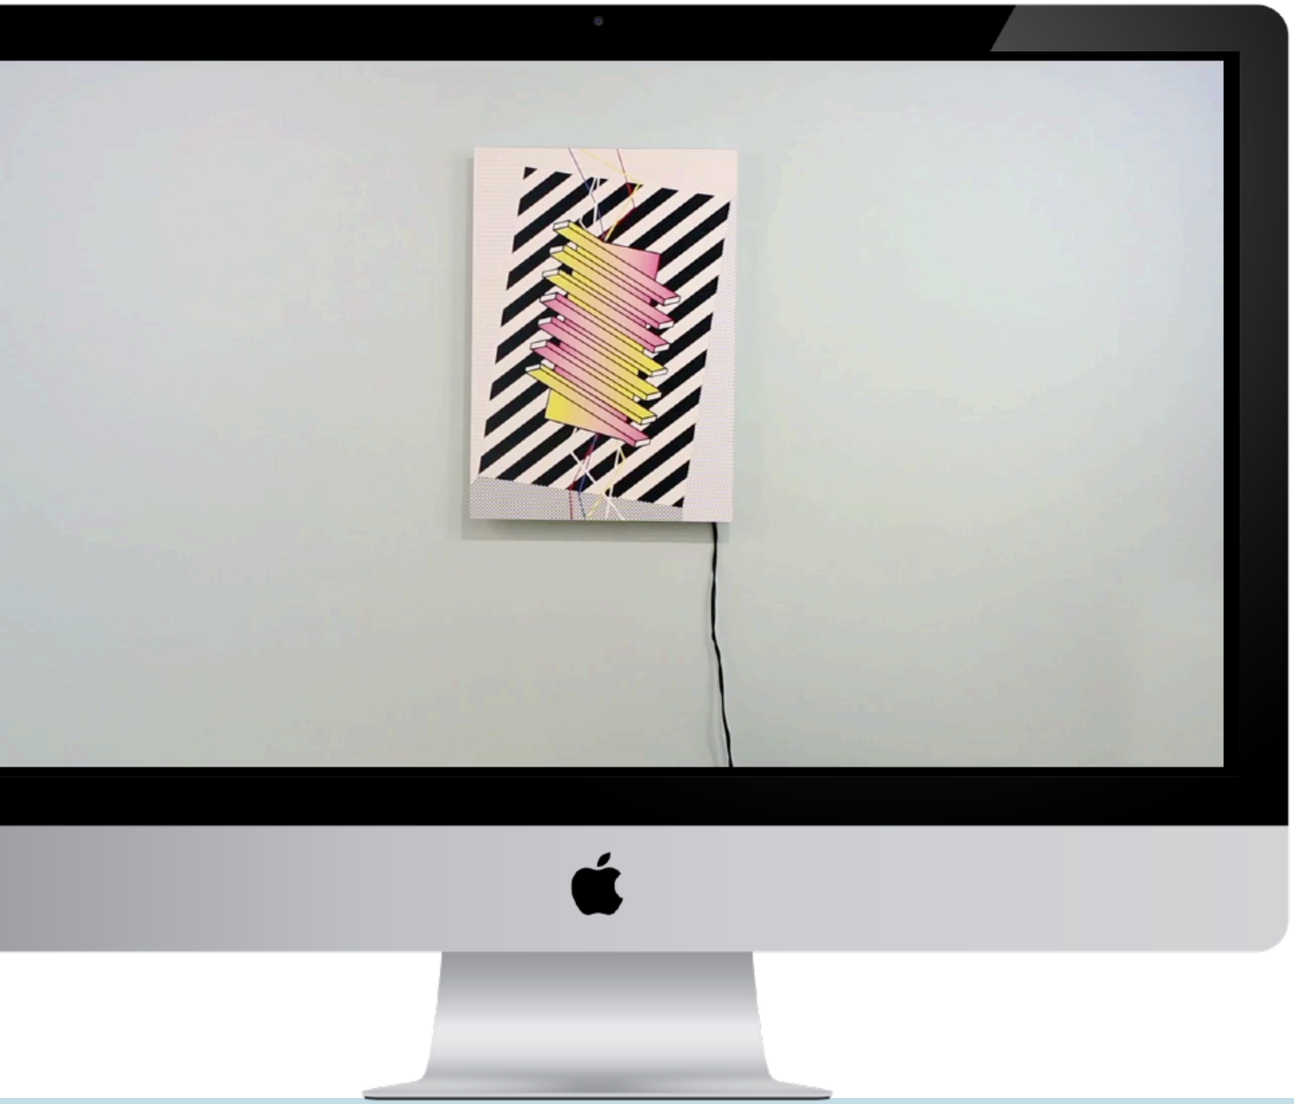

SOUND POSTER 2.0

Beck's Playable Poster - On the Streets

These large interactive posters show how 2D outdoor advertising can suddenly become collaborative and creative experiences. Probably using conductive inks, the posters use modular circuitry to process the inputs and then output through built in speakers.

Clear messaging from the first poster prompts users to engage with the latter posters. Without such CTA's the product might not necessarily be as successfully engaging due to their flat and traditional medium.
